

RoadRunner Mobile Digital Video Systems

Tech Tip: Recording a Single Audio Source to Multiple Cameras

The RoadRunner DVR features up to four (4) audio inputs. If there is only a single audio source and multiple cameras being recorded, the system is capable of recording the audio to each camera's audio input so that video clips made from any camera will have the same audio track. This configuration requires a BNC "Y" adapter.

NOTE: Audio **MUST** be activated for each camera using the RoadRunner's set-up menu. See operating and instructions manual for further instructions.
