Tech Tip: Microsoft® Windows Vista™ Hard Disk Drive Detection Issues

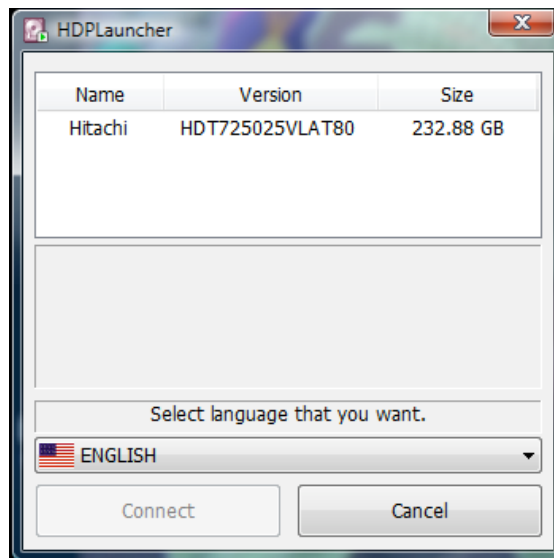

Utilizing Microsoft® Windows Vista™, you may have difficulties using HDPlayer Software to access data on a hard disk drive. This happens when the UAC (User Account Control) security feature is enabled on Windows Vista™.

To detect the hard disk drive on a PC with UAC enabled follow these steps:

- Hold the SHIFT key while selecting the HDPlayer icon with the RIGHT MOUSE CLICK button
- Select “run as” from the menu as shown below

This will allow you to view all hard disk drives connected to the PC. Select the drive, then select CONNECT.

Note: UAC is enabled on all Microsoft® Windows Vista™ platforms as a default security setting.
