**Apollo Video Technology to Implement Video Surveillance Technology throughout Milwaukee County Transit System**

*Technology Brings High-Definition Video and Live Streaming to Support Agency's Safety Initiative*

MILWAUKEE, Wisc., February 17, 2016 – Apollo Video Technology (Apollo Video) announced today that Milwaukee County Transit System (MCTS) has selected the company to outfit its fleet of buses with the RoadRunner HD™ mobile video surveillance system. MCTS sought a sophisticated solution that would meet its operational needs and improve overall safety and security for its passengers and operators. In addition to exceptional video quality, MCTS was impressed by Apollo Video's knowledgeable management team, who brought a proficient and supportive approach to the project.

"Key requirements in MCTS's search for a new system included delivery of reliable, high-quality video recordings as well as capability for instant live video and automatic downloads triggered by events. These features will save valuable time and resources in our goal to protect operator and passenger safety," said Dan Boehm, Managing Director of MCTS. "It is evident that Apollo Video brings extensive experience to mobile video surveillance, and we look forward to partnering with them. "

Apollo Video will install 415 RoadRunner HD™ systems across MCTS's fleet of fixed route buses, featuring 10 cameras per system. The system offers a rugged on-board recording solution that integrates with Apollo Video's state-of-the-art Vehicle Information Management (ViM™) Software. The system will allow MCTS staff to wirelessly download and easily manage video clips for evidentiary purposes. Once the video has been reviewed and archived by staff, short and long term storage will be available at a centralized server. The asset management feature of the ViM Software™ will ensure system components are serviced and up-to-date. Such capabilities mean that MCTS staff will be able to manage video and system information from their desktops and mobile devices – eliminating the need for manual system checks and additional tracking software.

"We are excited to partner with MCTS to provide a robust solution that addresses a multitude of MCTS's most pressing needs," said Rodell Notbohm, CEO of Apollo Video Technology. "The combination of the on-board RoadRunner HD™ system and management software delivers a sustainable and flexible solution that will improve operational efficiency and reduce costs while providing the highest quality video."

### **About Apollo Video Technology**

Apollo Video Technology is a leading manufacturer of video surveillance, fleet and information management solutions for public transit, rail, school transportation, law enforcement, military, commercial transportation, fire and EMS applications. With public and private-sector installations throughout North America and worldwide, the RoadRunner™ mobile video and audio recording system provides exceptional video quality with management software optimized for wireless downloading and live video streaming.

Renowned for its reliability, durability and ease of use, Apollo Video solutions improve accessibility of data and deliver streamlined, fleet-wide management of video surveillance and on-board equipment to reduce liability, mitigate risk, improve efficiency and reduce maintenance and operating costs. Apollo Video is unique in the industry with software interoperability and compatibility across multiple generations of hardware.

In 2015, Apollo Video was named the No. 1 supplier of transit bus mobile video surveillance equipment in the Americas<sup>1</sup> – an achievement held since 2010 that further supports the company's commitment to offer its customers superior, compatible solutions throughout the lifetime of their fleet.

Since its release in 2004, Apollo Video has supplied the RoadRunner™ system to over 375 agencies worldwide, representing more than 25,000 total implementations.
